

PRESS RELEASE

Eagle Hydraulic Components reveals its new logo!

March 6th 2017

For immediate release

Eagle Hydraulic Components announces *“a new image, sign of a new life,”* states the President, Mr. Feng Wang. *“We live in a world where a small quiet revolution is taking place: new technologies and approaches are emerging every day, and we are among those who are at the forefront. Our logo should represent that spirit of innovation which inspires our team everyday”* he adds.

Eagle's new signature is uncluttered - gray and yellow in color - reflecting the elements of Eagle's culture: confidence, elegance, creativity and optimism, while also alluding to its success in the market of mobile hydraulics worldwide.

Eagle Hydraulic Components has become a leading manufacturer of hydraulic cylinders, gear pumps, power units and other hydraulic components. We've exceeded the simple manufacturing of standard commercial cylinders to join the market of custom components that manufacturers are looking for. We are in business to provide solid solutions to our customers and we prove it every day with our new products and our approach, which is synonymous with confidence and reliability.

The unveiling of the new logo will also be formalized during the participation of Eagle to CONEXPO-CON/AGG 2017 in Las Vegas March 7-11, an international event.

The Eagle team would like to take this opportunity to thank our partners and loyal customers. We hope to work with them for a long time to come.
